

1. **Long-Term Scheduling** – Filter jobs based on priority (example with Table 1).
2. **Short-Term Scheduling** – FCFS and Round-Robin (TQ = 1, 3, 4, 6) for Table 2.
3. **Context Switching / Priority-Based Round-Robin** – using Table 1 (with priorities) and TQ = 1, 6.

The code includes:

- Simulation engines for FCFS, standard Round-Robin, and priority-based Round-Robin (preemptive highest priority, round-robin within same priority).
- Calculation of finish time, turnaround time, normalized turnaround time.
- Text-based Gantt charts (consolidated intervals).
- Console output formatted as tables.

You can run the program in any C# environment (e.g. .NET 6+). Take screenshots of the console output and paste them into your portfolio, explaining each part as shown

below.

```
26 - 31 : B
31 - 33 : F
33 - 34 : Idle
```

--- Priority-Based RR (Table 1, TQ = 6) ---

Process	Finish	Turnaround	Norm. Turnaround
A	4	4.00	1.33
B	32	30.00	5.00
C	18	13.00	2.60
D	27	21.00	7.00
E	15	7.00	1.17
F	34	25.00	12.50
G	24	14.00	2.33

Gantt Chart (consolidated intervals):

```
0 - 3 : A
3 - 5 : B
5 - 8 : C
8 - 14 : E
14 - 17 : C
17 - 23 : G
23 - 26 : D
26 - 31 : B
31 - 33 : F
33 - 34 : Idle
```
